**Warning: This process will disconnect the PC from the internet!**
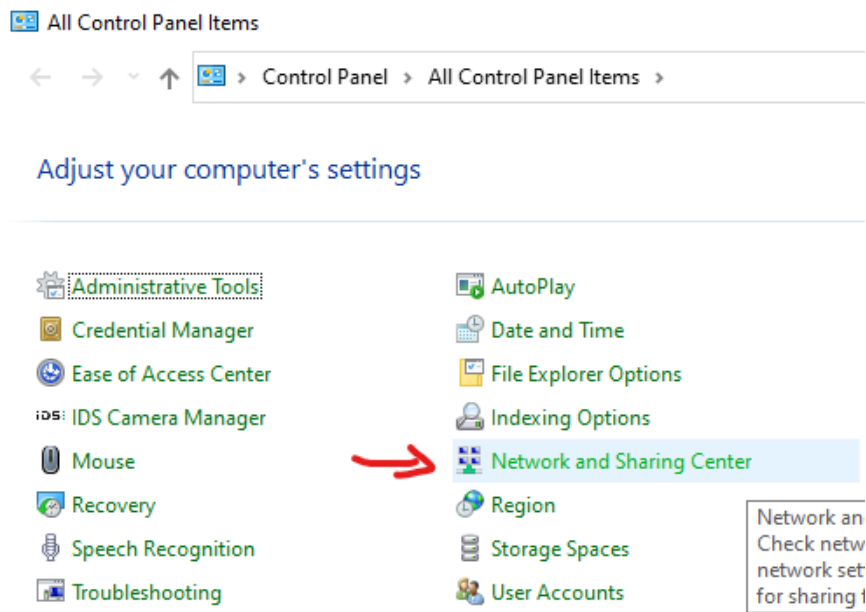

1. Don't mess with the router settings

2. If you haven't already connected to "**Liam**" on your RPi, connect to it using password "**raspberry**"

3. On the PC where the router is connected, make sure you are connected to "**MacSecure**" for the security exploit to work. You may need your Mosaic/Avenue login.

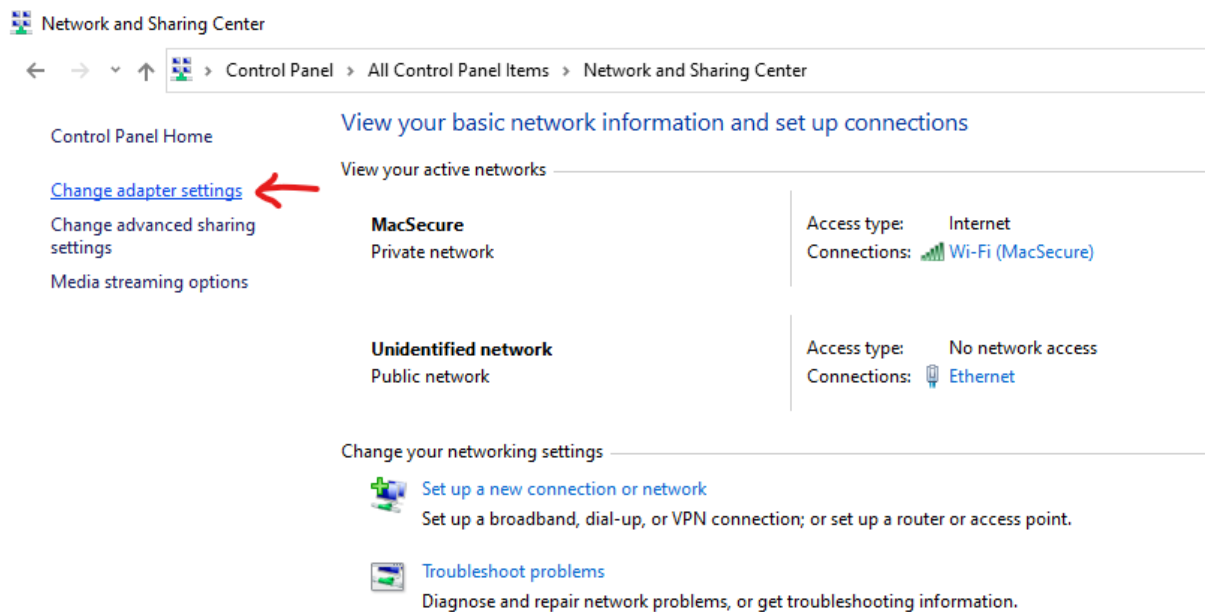

4. Hit "Start/Windows Key", type "**Control Panel**" and click on the link

5. Click "**Network and Sharing Center**"

6. Click "Change adapter settings"

7. Highlight the following network adapter, right click the selection, and bridge the two connections

8. It helps when you are actively trying to look up a webpage on your RPi. Give this about **15 seconds**.

9. The PC will lose its Internet Connection as soon as your RPi is connected to the internet. If this does not happen, then delete the network bridge and attempt to bridge the two connections again.

10. **Profit**.
